

Attestation Report

RUN #4471 · CORTEX ANALYST · WEALTH-MANAGEMENT / Q1-REVENUE · GENERATED 2026-07-03

BUSINESS QUESTION

“What was Q1 wealth management revenue, excluding internal transfers?”

EXPECT metric: revenue_booked
 grain: quarter × entity filter: excluding_internal_transfers

GOT metric: revenue_recognized
 grain: quarter × entity filter: — none applied

INTENT MATCH SCORE

73% intent match

wrong_metric

missing_required_filter

FINDING

This answer matched the intent specification at 73%. The AI used the correct entity and grain, but selected a non-canonical metric (revenue_recognized instead of the approved revenue_booked for wealth management reporting) and omitted the required excluding_internal_transfers filter. The query executed cleanly and returned a plausible value — the kind of failure that is invisible to monitoring because nothing looked statistically unusual.

What this attestation retains as evidence

- + Prompt, generated SQL, and final query result, as executed against the connected platform.
- + Semantic model version and platform version context at time of run.
- + Selected tables, columns, and join paths, resolved to their semantic role.
- + Full semantic intent diff, with typed failure categories for every mismatch.
- + Pass/fail reason in plain language, suitable for a compliance or audit review.
